DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The main house of the Clover Cliff Ranch is sited on the top of a long, sloping incline. It is an irregularly shaped two story stone building that was constructed in two phases. The oldest part of the house has become a wing which extends to the north. The newer part of the house, which was built in 1883, has an east-west orientation with the main facade facing south. The stone work on the 1883 addition is squared rock-face with dressed quoins, while that of the original house is squared rubble. Before the replacement of the south porch the design of the house showed more of the influence of the Italian Villa style.

The main entrance is centered on the south facade. A wood door with a leaded glass window is set in a segmental arched frame with a leaded glass transom and sidelights. The building projects forward to the west of the door. There are two evenly spaced windows on each story of this projection. Another window has been placed on the second story over the main doorway, and there are two windows on each story to the east of the door. The windows have been set in a vermiculated quoined opening and capped with a carved stone lintel. These lintels have carved keystones and corbels. An oval stone plaque inscribed with the name "Clover Cliff" and the date of construction "1883" has been set to the east of the window above the door. The wood entablature which crowns the building has modillions and intricately molded brackets. The frieze is a repeating pattern of two raised panels separated by a modified ballflower set between the ends of the brackets. Originally the house had a one story wood porch with a flat roof accented by metal cresting that ran east from the projection across the south facade. This has been replaced by an elevated one story veranda with a flat roof supported by stone pillars which extends further to the south than the original and wraps around the east side of the building. The wood entablature of the veranda is a close replica, on a smaller scale, of the building's entablature. The house has a metal truncated hip roof with metal cresting around the ridge. Two chimney stacks rise from the flat ridge of the roof.

There are two windows on each story of the 1883 addition on the east facade. A narrow, one story stone addition runs the length of the original building that extends to the north. The original building has a flat roof with a narrow stone band entablature.

A one story addition with a pitched roof has been attached to the north facade of the original building. A narrow, one story wood frame addition with a shed roof has also been built on the west facade of the original house.

There are several small, stone out buildings to the north of the main house. The barn to the south of the house which appears in early photographs no longer remains.

7. Additional descriptive material requested by the National Register. office:

The original house at Clover Cliff ranch was a one-room stone structure built from field stones found on the property. The room was heated by a large open fireplace. This room now forms the north end of the '

A kitchen, dining room and upstairs bedroom were added to the south of the original room in 1865-1866. The rooms still serve these same functions.

More bedrooms on the second floor and sitting rooms on the first story were added to the house in 1883. In this addition was placed' a serpentine staircase of walnut and maple.

The roof was resurfaced in 1917 with an alloy of copper, lead and The metal cresting which is original to the 1883 addition was left undisturbed at the time.

No major changes have been made to the interior except to take small portions of existing rooms and convert them to bathrooms as that type of plumbing became available.

STATEMENT OF SIGNIFICANCE

The imposing two-story stone ranch house southwest of Elmdale was built in 1883 by Jacob Ramer Blackshere.

J.R. Blackshere was born in 1834 in what was then Marion county, Virginia, but West Virginia after 1863. In 1857 he opened a dry goods store in Mannington, Virginia. Three years later he came to Chase county, Kansas and preempted and purchased 960 acres, made improvements and stocked some cattle. In the spring of 1861 he returned to Virginia (West Virginia) and evidently remained there until 1866 when he disposed of his business and returned to Chase county.

Blackshere was regarded as a pioneer and experimenter in agricultural practices. He was the first to introduce Galloway cattle into that section of the state. He also introduced grain sorghums into Chase county as a dependable grain crop. 1875 he purchased one and one-half bushels of alfalfa seed from San Francisco through the Emporia, Kansas firm of J. M. Griffith and Bro. for \$32,25. Although this marked the introduction of the crop to Chase county, there had been some scattered test plots elsewhere in the state. However, they appear to have been shortlived; it was Blackshere's planting that brought about the first continuous alfalfa growing in Kansas. At one time Blackshere had 1,200 acres in alfalfa out of his total holdings of close to 5,000 acres. He was said to have made a fortune from the sale of alfalfa seed. Blackshere also recognized the value of the native bluestem grasses of the Kansas Flint Hills for the rapid and economical fattening of cattle.

The old part of the ranch house was reportedly built in the 1860's. It was in 1883 that the large front portion was added. Construction evidently began in July, and a September 6 Cottonwood Falls newspaper reported that ten stone masons were working on the house and pushing for an early completion.

Blackshere was interested in public affairs and was for many years chairman of the Democratic County Central Committee. He served as county commissioner in 1874 and 1875 but otherwise refused to run for office, preferring to devote his time to the management of his Clover Cliff Ranch. He was also one of the organizers and directors of the Chase County Bank at Cottonwood Falls. In 1873, he helped organize the Agricultural Society of Chase County and was elected vice-president.

He died from typhoid fever at his home on November 10, 1894. After his death the property stayed in the family for another 17 years; apparently his wife's death in February, 1911, led to the sale of the property. A son, Earl Blackshere, managed the ranch from 1894 until its sale December 14, 1911, to H.L. Prather of

Madison, Kansas. When the Prathers acquired the property, they added the large front porch and a back porch. Ownership of the property is now held by the Katheryn B. Prather Heirs' Trust.

J.R. Blackshere was a pioneer agricultural innovator; his successful raising of alfalfa showed the way for a crop that has become a mainstay of the state's agricultural economy. The Clover Cliff Ranch House is a good example of the sophistication of the local stone masons and of a prosperous rancher's house. It reflects a style of living which played an important part in the development of the Kansas Flint Hills.
